Professional Diving Watches

In 1959, Charles von Buren dreamed of providing professional divers and diving enthusiasts alike professional, high-quality watches that they could trust. Today, his legacy lives on through the success of the brand and the iconic watches which still have the distinctive characteristics of the originals, from the high resistance to depth, unidirectional rotating bezel for

ease of reading decompression times, and the orange minute hand for better legibility during dives. Squaler watches are not only timepieces, but they are also performance-grade tools suitable for all divers from individuals to organizations who continue to pursue their passion for the chasing the depths of the sea and the discovery of its incredible ecosystem.

History of Over 60 Years

In 1946, Charles Von Büren, a manufacturer of watchcases for other brands, together with his wife established the company C. von Büren SA. In 1959, Charles decided to register the Squalo trademark, becoming a true pioneer during a time that professional diving watches were a virtually unexplored field in the industry while also beginning the story of Squalo. Squalo was immediately embraced by divers, establishing themselves in the world of diving as producers of professional, safe, reliable, and durable instruments capable of calculating compensation and immersion times.

Today, Squalo celebrates 60 years of history while also continuing as one of the few watchmakers in the sector that remains a family-owned business. The company based in Switzerland is now run by the Maggi family following the retirement of Charles Von Büren, who were close family friends and long-time business partners of the family. Andrea Maggi continues the brand's mission to provide Swiss made professional diving watches, growing on an international scale, and keeping the adventurous and pioneering spirit of its founder alive.

Partnerships & Collaborations

Over the decades, the quality and reliability of its watches allowed Squalo to partner and work with numerous professionals from various environments. The Squalo history is rich with collaborations with key figures from the diving world. Over the years, the brand has supported numerous sportsman and divers alike during competitions and setting new records, including as Jaques Mayol (free-diving world champion, record breaker), Enzo Maiorica (free-diving world champion, record breaker), French National Divers, Cuban Team (World Championship 1967), Maria Treleani (World Diving Champion), Tony Salvatori (Champion of France, 1967), Jean Tapu (World Champion 1967).

Squalo's mission over the years to support sportsman and divers hasn't changed. Today, the brand is proud to contribute and support individuals as well as organizations in their passions for activities related to the sea, including the Lords Of The Ocean (French Environmental group active in seaside protection) and the brand's official brand ambassador Vincenzo Ferri (Italian Record Breaker).

Squalo is an official provider for special forces such as the Italian State Police Diving Unit (2016) as well as actively collaborates with like-minded companies that work in the sea environment. The most recent collaboration, that has been a huge success and widely embraced by the Squalo community, was with Drass Galeazzi (2021), a leader in subsea technology for the Defence, commercial diving, and medical industries.

Swiss-making Precision

For over 60 years, Squaler has provided the highest level of quality standards for every piece produced. As a family-run watchmaker, Squaler has maximum control over every step of the planning, development, and production. The brand's Swiss tradition and know-how of watchmaking is recognizable in the

attention to detail that is taken in every phase of the watch creation, from the cutting-edge designs to the assembly by skilled horologist in our laboratories in Switzerland. Every Squaler watch that is produced meets the strict Swiss Made quality standard criteria, providing handcrafted excellence.

1521 Collection

Onda

The Tribute to the Sea

The ONDA segment of the 1521 series was realised with the aim of creating a model that enhanced the refinement and elegance of the classic 1521. ONDA, which translates to “wave”, depicts the concept in the unique dial through an engraved series of rippling waves, producing an exquisite play on reflections and light, recalling the sea.

The watches from this collection are not only outstanding professional tools known for their safety and reliability, but they are time-pieces that you will continue to wear and appreciate time and time again.

1521 Collection

Full Luminous

The Perfection in Vibrant Legibility

In the depths of the sea, the most crucial element of a diving watch is legibility. The 1521 Full Luminous version was created to provide professional divers a watch with maximum luminescence and legibility.

The key features which makes this collection stand out from others, is that the dial is made entirely of SuperLuminova, while the indexes and spheres are entirely black, creating a contrast that increases visibility in any environment or depth.

1521 Collection

Militaire

Inspired by The Military, Made for Divers

The Squale 1521 Militaire highlights even more the functional and high-performance aspect of this model, with three unique features: larger markers shown cleaner on the case, absence of the date, and only one Squale logo on the dial.

Designed to enhance legibility, the Militaire is available in two case finishes, polished and blasted matte, as well as two strap options, rubber tropic and mesh, making it the perfect companion to track and measure time during sea explorations.
